

## Halogen Docking Lights

Compact, flush mounted docking lights with an advanced 'DE' lens that provides a wide light angle for close range illumination forward of the bow.

The principle of a 'DE' lamp is similar to a projector. An ellipsoid reflector aims the light at a convex lens, which projects the light with the designed light distribution.

Available with impact resistant plastic housings or polished 316 stainless steel housings for attractive recess mounting into the hull near the bow.
