

How to install a door on a big «O» evaporator

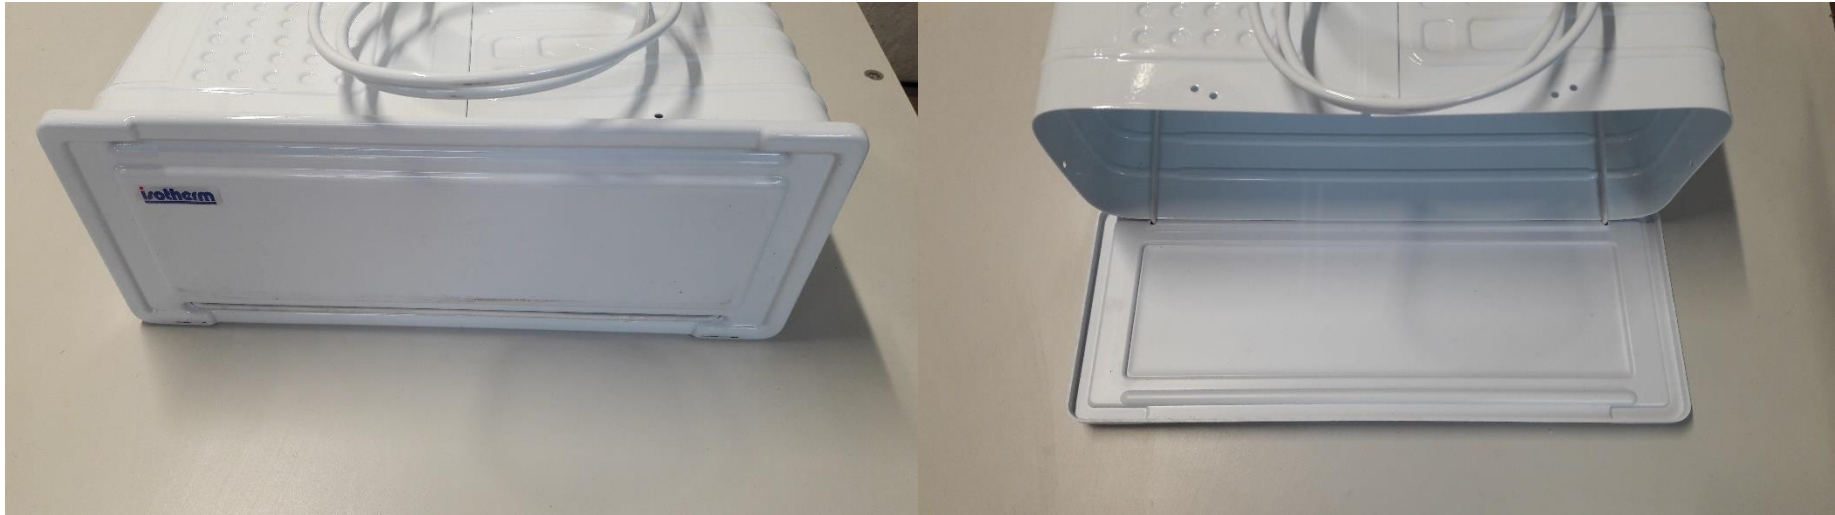

Place the door in the right position

On the back place the 2 ends of the band like in the picture

Pull the rubber band until and reach a good tension. This should be enough to let the door open and close properly. A few tries are expected. Tight the knot.

Make sure the door opens and closes correctly. In the open position the door remains open.

Cut the excess. The door is installed
