

Rocna Original Anchor Holding Power

This document is intended for informational purposes only and provides guidance regarding the holding performance of the Rocna Original anchors.

Rocna Original anchors are manufactured using rolled steel plate shanks welded to rolled steel plate flukes. The Rocna Original anchor design has been tested and validated to deliver Super High Holding Power (SHHP) for the following anchor sizes:

- 4 kg
- 6 kg
- 10 kg
- 15 kg
- 20 kg
- 25 kg
- 33 kg
- 40 kg
- 55 kg
- 70 kg
- 110 kg

The Rocna Original anchor sizes listed above were previously covered under RINA Type Approval Certificate PRD068316WS and were validated through both seabed and mechanical testing.

The above referenced Type Approval Certificate has since expired and is no longer active. However, no design modifications or changes to fabrication methods have been made since the certificate's expiry. As a result, the anchors continue to be manufactured to the same design as those originally validated during the Type Approval process, ensuring continued SHHP performance.

A copy of the expired certificate can be provided upon request.

This statement applies only to Rocna Original Anchors and does not include Vulcan or Rocna Mk II anchor models.
